Dr. Michael Mann, Professor
Penn Center for Science, Sustainability and the Media
University of Pennsylvania
Philadelphia, PA 19104

Dear Dr. Mann

Physics teaches us the “greenhouse gas” climate change theory is false.. Conservation of mass and energy is preserved.

Physics also proves that nature regulates carbon dioxide concentration in the air. Henry’s Law and associated principles define the ratio of water soluble trace gases in the atmosphere.

There is not one shred of physical/empirical evidence to support anthropogenic climate change and the proxy data based on ice core samples is neither relevant, properly explained, nor appropriate to support anthropogenic climate change.

But the climate change nonsensical propaganda is ever expanding. Why?

Orchestrators of the climate propaganda hope to place enough dampers on BIG ENERGY (hydrocarbon and nuclear fission) to greatly reduce energy worldwide thus destroying the economies of independent countries like the US thereby causing a worldwide order of magnitude population reduction over the next few hundred years leading to the establishment a one world government.

Unfortunately this orchestrated propaganda is so pervasive that the media has become the principal driver and the political bodies around the world react to it with gusto to “solve the problem”... a problem which does not exists...to satisfy their constitutes.

Professor Michael Mann
University of Pennsylvania
July 28, 2023

Our team recently completed a study of net CO₂ data (notice that net is underlined for emphasis) before, during, and after the 1991 Pinatubo eruption. Our analysis is wholly consistent with Henry's Law which, of course, is why Henry's Law is a law of science not a theory. When you have time please read our written report and scan our supporting video at: <http://pinatubostudy.com>

I look forward to receiving any empirical evidence you can provide which would necessitate an adjustment of my assertions above or our findings from our Pinatubo Study.

More recently the reduction of worldwide hydrocarbon fuel combustion at the beginning of the COVID19 global lockdowns provides similar proof of the total lack of correlation between net atmospheric carbon dioxide concentration and hydrocarbon fuel use as explained in my article published in Shale Magazine at: <https://shalemag.com/nature-controls-co2-not-man-op-ed/>

Thank you for your anticipated cordial and informative response. I have posted this letter on our public website and look forward to posting your response.

Best regards,

Tom Tamarkin
